

TECHNICAL SKILLS

Here are five ways to develop your writing skills.

1.

TAKE CLASSES.

The only way to get better at writing is continuous practice. Write an essay, diary entry, blog or even an idea script, but make sure you write every day.

2.

EXPERIMENT WITH ALL SORTS OF SOFTWARE.

Love trying out new apps and software? Try a new one every few days! Start using a software without reading the instructions, and see if you can figure out how it works.

3.

HANG OUT WITH TECHIES.

Find people on online forums or join the computer club at school. Discuss the latest software, talk about software you're working on, and work together to resolve each other's doubts.

4.

ONLINE TUTORIALS.

You can take online tutorials over and over until you grasp the concept completely. So, watch videos, read articles, look up online courses, etc., to help you understand technology better.

5.

READ BOOKS.

Read books published by experts. Visit your school or local library to check out books on technology, or sign up for magazines like Digit that publish the latest developments in technology.
